Performance Commentary

Capital continued to flow into emerging market equities driven by a profit turnaround. Return on equity in EM again exceeded that of developed markets.

Our Korean holdings performed strongly in May supported by anticipation of improved governance following the election of Mr. Moon as President. We also see signs that the excessive discount on our preference shares is narrowing. On the flipside, political uncertainty in Brazil created headwinds after accusations of President Temer knowing about corruption. This might delay needed reforms.

We sold out of Sistema after Rosneft announced a significant claim against the company, as we are uncertain of the objectiveness of the Russian legal system. We also exited Apollo Tyres, after a strong return, and OCI Co.

L.M. Ericsson and China Unicom entered the portfolio, which now consists of 54 holdings. The top 35 holdings represent 84% of capital. These are valued at a weighted average P/E of 10.1x on our 2017 estimates versus 12.1x for the MSCI EM index. Trailing P/BV is 1.1x versus 1.7x for reference index. For our largest holdings, we see a weighted average upside to our target prices of 29%.
